Magnox Chaplecross were the first NDA estate site in the UK to introduce the PacTec certified flexible packaging technology as an alternative mechanism for the packaging, transport and disposal of LLW.

This innovative decommissioning mind-set was the initial foundation for PacTec in the UK. PacTec have provided Magnox Chaplecross with flexible packaging technical support together with nuclear expertise to various decommissioning projects from 2011, and in many instances this development has been shared with the Magnox community on other sites to provide an improved cost effective and environmentally sustainable approach to packaging, transport and disposal of LLW.

PacTec continues to support the decommissioning mission at Chaplecross utilising PacTec's expertise and extensive knowledge for over a decade in the packaging and disposal of radioactive material.
